December 2, 1996

Dear Lester,

At our last BDAC meeting, I thought we were going to discuss items that were in our meeting packet and I was ready to comment on them but it seemed like the agenda did not provide for comments on specific items in the meeting packet. So, here are my comments:

COMPONENT INTEGRATION EXAMPLE AND LINKAGES**Problem and Objective Statements: Ecosystem Quality; Problem**

- 4th paragraph, 1st line: Insert and are still causing after have caused
- 4th paragraph, 3rd line: Insert continue to contribute after may also have caused

Objectives:

- add "Improve water quality"
- add "Increase the number of screens in facilities constructed to support water diversions"

Problem and Objective Statements: Water Supply Reliability**Objectives**

- ability to efficiently transport water
- add as an objective "Improve access to water for fishery needs"
- add as an objective "Provide adequate supply and timing expected for fishery needs"

Problem and Objective Statements: Water Quality**Problem**

- 2nd line: agricultural and fisheries sectors

Objectives

- Please explain the 2nd bullet
- add as an objective "Improve the availability and quality of water for fishery needs"
- add as an objective "land retirement (as stated in BDAC deliberations under Bay-Delta Program Course of Action, page 4)"

Problem and Objective Statements: System Vulnerability**Linkages--Ecosystem Quality**

- 10th line change reuse to use of dredge material

Phase II Alternatives

- last bullet: change reuse to use

Water transfers can not impact, restrict or affect fish production. When water transfers are done, non-consumptive water usage has to remain as non-consumptive water usage.

TARGET SETTING EXAMPLES

- Adaptive Management/Monitoring (page 7) Should team be term?
- Ecosystem Stressor (page 9) does the target rationale agree with the target? The target rationale recommends screening all diversions, while the target says to screen 50%.
- Appendix A page 3, 5d. predation and mortality rates

If you need further clarification on any of these comments, please let me know.

Sincerely,

P. Parravano
